Bazaar App

Installation Guide for iPhone, iPad and Android Devices

WHAT THIS GUIDE COVERS

This document explains only how to open, install and test the app. Instructions for products, stock, orders, reports, backup and restore are in the User Manual inside the app under Guide.

Before You Begin

- Use the app link and license information supplied after purchase. Do not attempt to install from a ZIP file.
- The first opening and installation require a working internet connection.
- Do not use Private Browsing or Incognito mode.
- Keep enough free storage for product pictures, orders and backups.
- The app stores business data locally on each installed device. Two devices do not automatically synchronize.

What you need

- For iPhone or iPad: an updated device with Safari.
- For Android: an updated phone or tablet with Google Chrome or another browser that supports PWA installation.
- Your purchased app link and, when supplied, your one-time license code.
- A Files, iCloud Drive or Google Drive location for future backups.

IMPORTANT

A downloaded source ZIP is not an installable mobile app. Always begin by opening the secure HTTPS app link in the correct browser.

Install on iPhone or iPad

1. Connect the device to the internet.
2. Open Safari. Do not use a private tab.
3. Type or paste the purchased app link into Safari, then open it.
4. If the app asks for a license code, enter the code exactly as supplied and complete activation.
5. Wait for the app to finish opening. Confirm that the header shows a saved status and an app version.
6. Tap Safari's Share button - the square with an upward arrow.
7. Scroll through the Share menu and tap Add to Home Screen.
8. Check the app name, then tap Add.
9. Return to the Home Screen and open the new app icon.
10. Keep the internet connected for this first opening. Wait at least 20 seconds before closing the app.

> **IF ADD TO HOME SCREEN IS MISSING**
>
> Make sure the link is open in Safari rather than inside Facebook, Messenger, Gmail or another app. Use the browser option to open the page in Safari, then try Share again.

Verify the iPhone or iPad installation

1. Open the installed app icon while online.
2. Open the Backup page and check the Offline Status message.
3. Close the app completely.
4. Turn off Wi-Fi and mobile data, then open the installed icon again.
5. If the app opens, the offline installation test passed. Turn internet access back on afterward.

Install on an Android Device

1. Connect the Android phone or tablet to the internet.
2. Open Google Chrome. Do not use Incognito mode.
3. Type or paste the purchased app link into Chrome, then open it.
4. If the app asks for a license code, enter the code exactly as supplied and complete activation.
5. Wait until the app has opened and shows its saved status and version.
6. If an Install App message appears, tap it. Otherwise, open Chrome's three-dot menu and choose Install app or Add to Home screen.
7. Confirm the installation when Android asks.
8. Open the app from its Home Screen or app launcher icon.
9. Keep the internet connected for this first opening and wait at least 20 seconds before closing it.

> **MENU NAMES MAY DIFFER**
>
> Depending on the Android model and browser version, the command may say Install App, Add to Home Screen, Create Shortcut or a similar phrase.

Verify the Android installation

1. Open the installed app icon while online.
2. Open the Backup page and check the Offline Status message.
3. Close the app completely.
4. Turn off Wi-Fi and mobile data, then reopen the installed icon.
5. If the app opens, the offline installation test passed. Turn internet access back on afterward.

After Installation

Once the offline test passes, open the Guide page inside the app and follow the Full User Manual. Begin by confirming the tax setting, adding products, opening a test bazaar and creating a Full Backup.

Data and device safety

- Create a Full Backup after initial setup and after every bazaar.
- Save backups outside the app, preferably in Files, iCloud Drive or Google Drive.
- Deleting the Home Screen app or clearing its browser website data may erase local records.
- A second device is a separate installation. Restore a backup only when you intentionally want to replace that device's existing app data.
- If the device is replaced or reset, install the app again and restore the latest backup.

Common installation problems

The app asks for internet during the offline test	Reconnect, open the installed app once, wait at least 20 seconds, close it and repeat the offline test.
The page opens inside Facebook or Messenger	Use Open in Browser or copy the link, then paste it directly into Safari or Chrome.
Add to Home Screen or Install App is missing	Confirm that you are using Safari on Apple devices or Chrome on Android and that you are not in private/incognito mode.
Records are not visible on another device	This is normal. Installations do not synchronize. Use Full Backup and Restore only when you intend to transfer or replace records.
The app was deleted	Reinstall it using the purchased app link. Restore the latest Full Backup if local records were removed.

BUY-AS-IS PRODUCT

Installation assistance and technical support are not included unless separately purchased. Keep this guide, the original app link, license information and regular Full Backups in a safe location.
